

## **Sprint to the OEP Finish Line with Today's Options PPO! PCP Selection No Longer Required**

There are 57 days left in the Open Enrollment Period. Do you have your running shoes on? If so, we hope our Today's Options PPO plan is getting you to the finish line. Our PPO product offers clients benefits such as low premiums, low copays and low maximum out-of-pocket (MOOP) amounts. Members enjoy savings, protection and freedom of choice - a combination that may be difficult to find in competing Medicare Advantage plans.

### **News That Will Get You Moving:**

When enrolling beneficiaries into a Today's Options PPO plan, the enrollee is no longer *required* to select a Primary Care Physician (PCP). Furthermore, if a PCP was not completed on an enrollment, we will no longer be automatically assigning a PCP to the member in most markets. However, we do still encourage you to collect the PCP from the beneficiary, but it is not required. An outreach program has been implemented to contact members who do not provide a PCP. In a very few markets, a PCP may be contractually required. A list of those markets will be available to you on AgentLink soon.

### **Product Overview:**

Today's Options PPO reduces members' healthcare costs by contracting with doctors, hospitals and other healthcare providers to provide quality care at in-network rates, with an extensive and reliable provider network members can count on.

Today's Options PPO is about convenience and choice. Members are not "locked in" to the in-network option. They can also go out-of-network, visiting doctors and hospitals they choose (subject to higher co-payments and coinsurance). Today's Options PPO delivers flexibility and savings that clients might never have expected from a network plan.

Remember, Today's Options PPO members also enjoy something not available under any competing plan: Universal American's Healthy Collaboration. As part of this model, plan members will have access to wellness programs, low- or no-cost routine exams, and other special services designed to help promote and maintain their good health.
